

A vibrant pink and red background featuring a large central heart, a calendar showing Feb 14, a ring box, a teddy bear holding a heart, a candy, and an envelope with a heart. The text "VALENTINE'S DAY HACKATHON!!!" is written in large white letters across the heart, and "QMML Society" is written in red below it.

# VALENTINE'S DAY HACKATHON!!!

QMML Society

# Welcome!!!

AIM: Use Python and Machine learning to predict who has a Valentine's date using a lighthearted dataset of lifestyle and personality traits. The creator of the most accurate model wins a £50 Amazon voucher

Deadline: Friday 20th Feb 8:30PM (Collab with Fintech!) - Here you will present solutions

# Instructions

Follow this link to the Kaggle Competition site:

<https://www.kaggle.com/t/2ad09a2d970241e88bbd69e469819448>

You can work with other people however submissions can only be made individually and the prize only goes to one person

**PRIZE**

**£50 Amazon  
Voucher**

## NEED HELP?

1. Go to QMML github -> Kaggle : Link:  
<https://github.com/Queen-Mary-Machine-Learning-Society/QMML>
2. Look at sample submissions
3. Look at weekly slides and particularly notebooks as these are hands on implementations to Kaggle competitions using different algorithms.

Link to notebook submissions:

[https://github.com/Queen-Mary-Machine-Learning-Society/QMML/tree/main/Kaggle\\_Seasons/kaggle\\_notebooks](https://github.com/Queen-Mary-Machine-Learning-Society/QMML/tree/main/Kaggle_Seasons/kaggle_notebooks)

MAIESHA SIDDIKA · COMMUNITY PREDICTION COMPETITION · PRIVATE · 5 DAYS TO GO

## Valentine's Hackathon

Welcome! Your aim for this hack is to predict whether someone has a date or not.

Overview Data **Code** Models Discussion Leaderboard Rules Team Submissions Settings

### Notebooks

Search notebooks Filters

All **Your Work** Shared With You Bookmarks Hotness ▼

**+ New Notebook**

1. Go to the “Code” tab
2. Go to “New Notebook”

# Navigating Kaggle for beginners

```
+  -  ✂  📄  📁  ▶  ▶▶ Run All  Code ▾

▶ # This Python 3 environment comes with many helpful analytics libraries installed
# It is defined by the kaggle/python Docker image: https://github.com/kaggle/docker-python
# For example, here's several helpful packages to load

import numpy as np # linear algebra
import pandas as pd # data processing, CSV file I/O (e.g. pd.read_csv)

# Input data files are available in the read-only "../input/" directory
# For example, running this (by clicking run or pressing Shift+Enter) will list all files under the input directory

import os
for dirname, _, filenames in os.walk('/kaggle/input'):
    for filename in filenames:
        print(os.path.join(dirname, filename))

# You can write up to 20GB to the current directory (/kaggle/working/) that gets preserved as output when you create a version using "Save & Run All"
# You can also write temporary files to /kaggle/temp/, but they won't be saved outside of the current session

/kaggle/input/valentines-hackathon/sample_submission.csv
/kaggle/input/valentines-hackathon/train.csv
/kaggle/input/valentines-hackathon/test.csv

+ Code  + Markdown
```

## 3. Run this first cell

Now you have the data (without even downloading) and can start trying to code a model!

**Thank you**
