

Christmas Hackathon

QMML Society

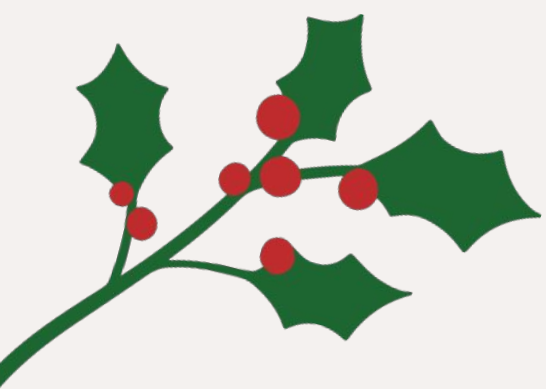

Instructions

Teams can use an ML model they want to solve a binary classification task.

The aim is to predict whether an item is returned or not from a Christmas sales dataset

1st Prize

The best submission that gets the highest accuracy on the test dataset.

2nd Prize

The team with the best charts and visualisations.

How to retrieve the data

1. Go to QMML github (QR Code attached)
2. Go to Hackathon Folder
3. Data and Starter notebook attached

What does the dataset look like

Train shape: (8000, 25)

Test shape: (2000, 24)

	TransactionID	Date	Time	CustomerID	Age	Gender	Location	StoreID	OnlineOrderFlag	ProductID	...	PaymentType	PromotionApplied	Disc
0	1	12/24/2020	7:27:59	441	27	Other	City_15	NaN	True	106	...	Credit Card	False	
1	2	11/18/2022	14:36:39	340	43	Male	City_13	NaN	True	816	...	Credit Card	True	
2	3	12/26/2019	20:23:50	31	25	Other	City_7	92.0	False	508	...	Credit Card	False	
3	4	11/13/2018	23:08:08	39	64	Male	City_20	100.0	False	710	...	Debit Card	False
