

Sortino Ratio

**Top 1
Grove
Vision AI**

$$\text{Sortino Ratio} = \frac{R_p - R_f}{\sigma_d}$$

The Lucky Team

Exactly as it sounds this is completely random

Part 3

Simulation

The Game

A simpler simulation

NO DATASETS

The questions will be simple. You will estimate the true value and the uncertainty associated with it. This is the best practice and the most similar thing you will do to the actual competition.

RECALL

Standard rules apply:

- If you run out of money, you will be eliminated. It is better to be risk-averse at the start.
- Even if you know the true value, you still want to profit from the spread. Being the market maker can be very profitable but very dangerous here.

Simulation Question 1

I am thinking of a number
between 1 and 100. Can
you create a market for
that?

Simulation Question 2

I will start a timer and stop
it. Create a number for
that value.

Simulation Question 3

How many pages does this
book have?

Simulation Question 4

Think fast

Simulation Question 4

How many monkeys did
you see on that picture?

Simulation Question 5

How many different people
signed up for this
hackathon?

Simulation Question 6

Think fast again. Count
how many times the letter
N appears.

Simulation Question 6

NNMMMMMMMMMMNMM
MMNMMMMNNMMMMN
MNNMMMMMNMMMMMNM
MMNMNMMMMMMMMMM

Simulation Question 6

Create a market for the
number of letter “N”s.

Simulation Question 7

What is my phone battery?

Simulation Question 8

I will roll 6 dice. What is the
total?

Simulation

Question 9 (Last Round)

I will toss 20 coins. What is
the total number of heads?

Part 3

Simulation

The background is a dark, gradient space transitioning from black at the top to deep purple and blue at the bottom. In the center, a rectangular, light-colored pedestal sits on a reflective surface. To the left and right, there are glowing, multi-colored arcs resembling orbits or light trails. In the upper right corner, a bright, multi-pointed star or nebula-like object is visible.

THANK YOU!
